ABOUT ME

Data Analyst with a proven track record at PT Bank Mandiri (Persero) Tbk, transforming large-scale transaction data into insights that drive decision-making. Experienced in designing interactive dashboards (Excel, web, mobile) and automating the processing of millions of data rows with Python to monitor the performance of Livin' by Mandiri, Livin' Merchant, EDC, and ATM.

WORK EXPERIENCE

Administration / Data Analyst

2023 - Now

PT Bank Mandiri (Persero) Tbk

- Prepared periodic reports for the Transaction Banking Retail unit with high accuracy and timeliness.
- Designed interactive Excel dashboards to monitor the daily performance of Livin' by Mandiri, Livin' Merchant, and EDC in Region 10.
- Developed a dashboard automation application that significantly accelerated the report preparation process.
- Built a data automation application (Python) to process millions of rows of funding and merchant data.
- Developed visual communication strategies to support branding and engagement on Bank Mandiri's digital channels.

Founder & COO

2021 - 2023

PT Alfals Arta Celebes

- Led company operations across multiple sectors: floral arrangements, textile services, café, and production house.
- Ensured efficiency across all business processes.

Content Creator

2021

Office of the Governor of South Sulawesi

- Designed and managed visual content for the @sulselprov social media (graphic design, infographics, video).
- Developed content strategies to increase engagement and strengthen the local government's positive image.

Administration & Multimedia

2019 - 2020

PT Pelabuhan Indonesia IV / Pelindo

- Managed and updated Human Capital data within the company system.
- Designed employee training programs as well as visual materials and multimedia content.

Freelance Graphic Designer

2017 - 2023

Berama Creative Art

- Created high-quality visual content: graphic design, video editing, animation.
- Led end-to-end creative projects using Adobe Photoshop, Illustrator, Premiere Pro, After Effects.

Hey There, I'm Taufik.

Business Intelligence

KPI · Reporting

What do I do?

I help transform large-scale operational data into dashboards, reports, and automation systems that make decision-making easier.

From web & mobile dashboards and desktop automation apps to dynamic Excel reports — all designed to be fast, accurate, and easy to read.

6+

Systems Built

3.5 M+

01 Real-Time Banking Performance Monitoring & Branch Ranking System

Internal Web Dashboard — PT Bank Mandiri (Persero) Tbk · Region X

Web Dashboard

Data Visualization

Excel Processing

UI Design

180

Branches

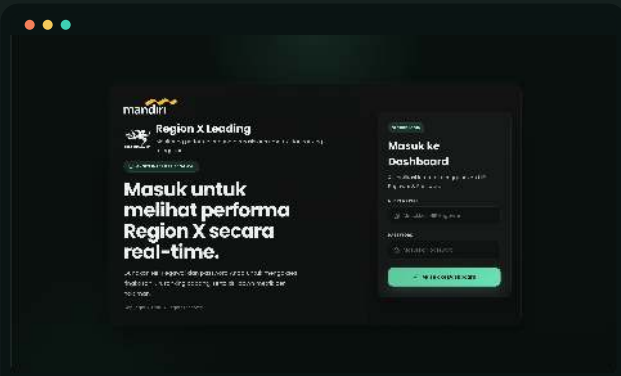

Real-time

Updates

1 screen

KPI summary

OVERVIEW

A web-based internal dashboard to monitor the performance of 180 branches in real time and weekly. It transforms raw Funding, Credit, and new customer acquisition (New CIF) data into KPI summaries, achievement status, and branch rankings that are easy for management to read.

PROBLEM

Branch performance monitoring was previously scattered and manual, making it hard to quickly see which branches were excelling or needed attention.

WHAT I DID

Designed and built the dashboard with an internal login (employee ID), structured Funding & Transaction and Credit summaries, an Achievement-per-Product chart, color-coded status (Green $\geq 100\%$, Yellow 95–99%, Red $< 95\%$), and Top 5 / Bottom 5 Branch panels. Equipped with filters, search, and per-metric drilldown.

RESULT & IMPACT

Management can view the status of all 180 branches on a single screen — for example identifying 127 red-status branches in Funding — making decisions and branch coaching priorities faster and data-driven.

① Note: All figures shown in the screenshots are randomized (dummy) data, not actual figures, to protect the company's confidentiality.

02 TBRX Apps — Smart Monitoring & Merchant Management System

Internal Mobile App — Transaction Banking Retail Team · PT Bank Mandiri · Region X

Mobile App

Data Visualization

Excel Processing

UI/UX Design

360k+
Merchants

692
ATM machines

4,000+
Employees

OVERVIEW

An internal mobile app to monitor Region X transaction and merchant performance daily. It combines the LVM, EDC, Merchant Identifier, GMM, and ATM modules into a single Control Center presenting data on hundreds of thousands of merchants and hundreds of machines.

PROBLEM

Performance data was scattered across many Excel files and hard to manage in the field, making merchant, EDC, and ATM monitoring slow and complicating real-time follow-up.

WHAT I DID

Designed a mobile app with internal login and modular dashboards: a daily-summary Control Center; LVM monitoring 360k+ merchants and USAK achievement; EDC with area ranking and YTD achievement; Merchant Identifier for merchant profile search with Excel export; ATM monitoring 692 machines; and GMM tracking participation of 4,000+ employees.

RESULT & IMPACT

The team can monitor Region X performance on mobile in real time — for example instantly spotting 4 'Zero Transaction' ATMs — making field follow-up far faster and data-driven.

① Note: All figures shown in the screenshots are randomized (dummy) data, not actual figures, to protect the company's confidentiality.

03 Automated Merchant Data Management Desktop Application

Desktop Data Automation App — Transaction Banking Retail · PT Bank Mandiri · Region X

Python

Pandas / Parquet

Desktop GUI

Excel Automation

Data Matching

3.5 M

Funding records

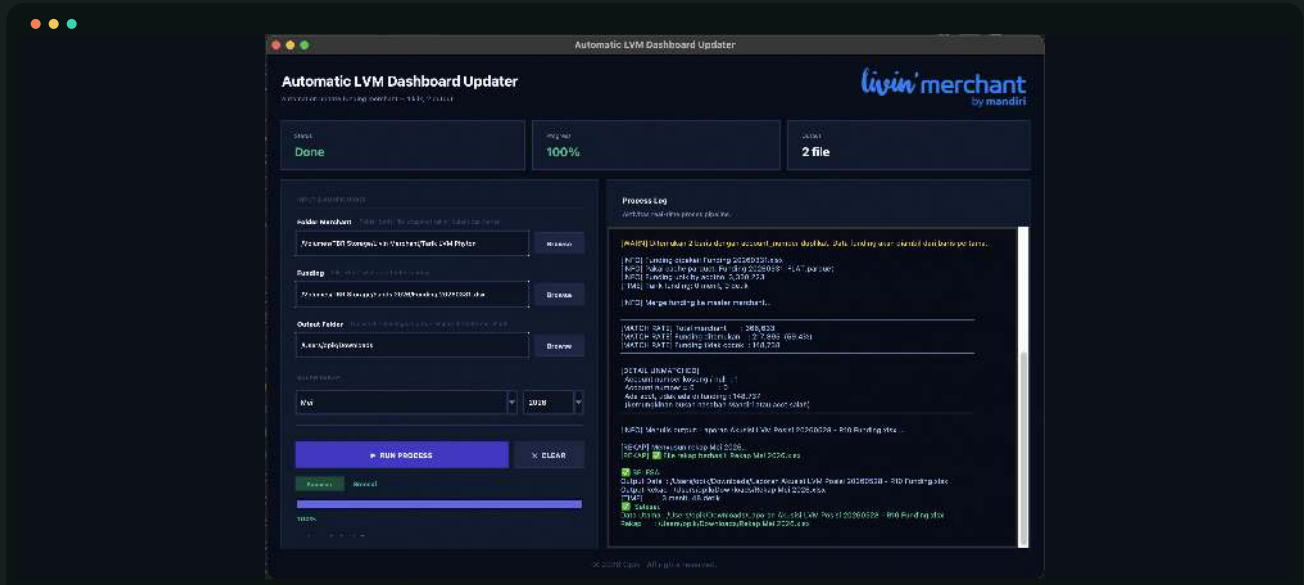

~4 min

From hours

1 click

Full automation

OVERVIEW

A desktop application to automate the daily update and matching of merchant funding data that was previously done manually. With one click it pulls funding data, merges it into the merchant master, and produces two ready-to-use outputs.

PROBLEM

Funding and merchant data is updated daily at very large scale — 3.5 million customer records and 360 thousand merchants. Processing it manually was heavy, slow, and error-prone.

WHAT I DID

Built the 'Automatic LVM Dashboard Updater' with a simple interface. Behind the scenes: processing millions of rows, parquet caching for speed, automatic handling of duplicates and empty accounts, matching funding to merchants by account number, and a real-time process log with match rate and unmatched details for audit.

RESULT & IMPACT

A process that previously took hours is now automated in ~4 minutes for 366 thousand merchants and 3.3 million funding records (59.4% match rate). Two output files are ready daily, saving significant time and improving data accuracy.

① Note: All figures shown in the screenshots are randomized (dummy) data, not actual figures, to protect the company's confidentiality.

04 Dynamic e-Channel Performance Dashboard (Excel-Based)

Interactive Excel Dashboard — Transaction Banking Retail · PT Bank Mandiri · Region X

Microsoft Excel

PivotTable

Dynamic Formulas

Conditional Formatting

3 Channels

ATM-EDC-LVM

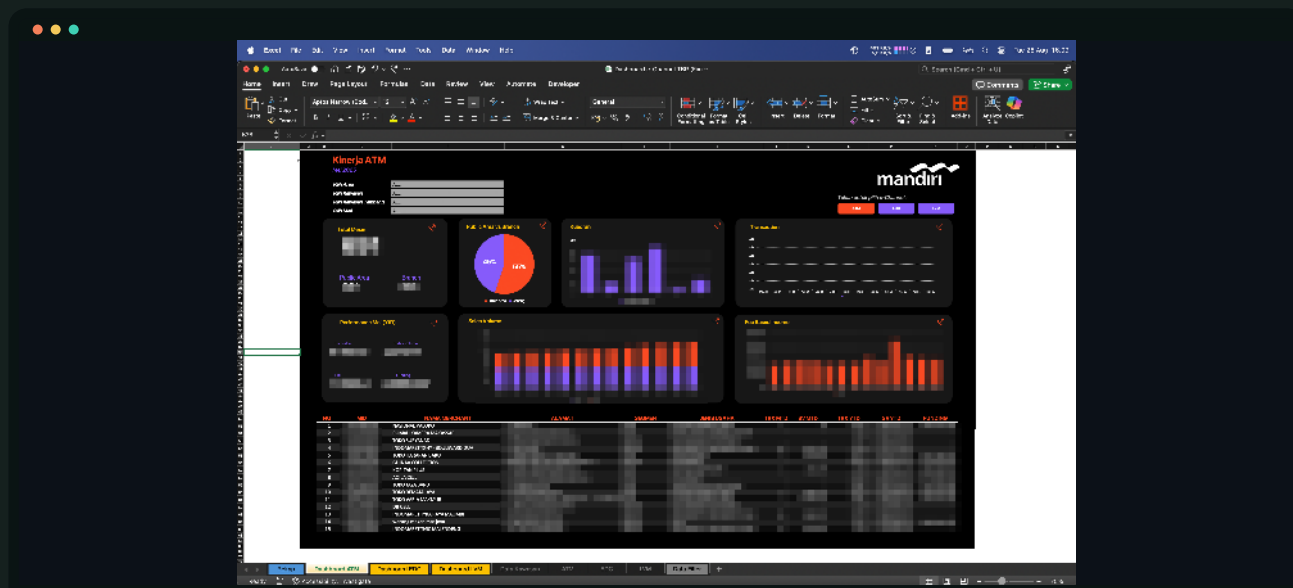

Monthly

Auto-update

Interactive

Dynamic filters

OVERVIEW

A dynamic Excel dashboard to monitor e-Channel performance (ATM, EDC, LVM), updated monthly. It consolidates raw data from multiple sheets into a single interactive visual view with filters, charts, and a merchant detail table.

PROBLEM

ATM, EDC, and merchant performance data was scattered across many sheets and hard for management to read. A single, tidy, interactive, and filterable monthly report was needed.

WHAT I DID

Designed an Excel dashboard with cross-channel navigation (ATM, EDC, LVM) and dynamic filters (Area, Region, Mall). Visualizations include total machines, Public Area vs Branch, quadrant distribution, transaction trends, Sales Volume, and Fee Based Income — all auto-updating with filters. Built with PivotTables, dynamic formulas, and conditional formatting.

RESULT & IMPACT

Management gets a single interactive, easy-to-read monthly report and can filter performance by area or channel in a few clicks. Reporting is faster, consistent, and tidy without reprocessing raw data.

① Note: All figures shown in the screenshots are randomized (dummy) data, not actual figures, to protect the company's confidentiality.

05 Daily Acquisition Reporting System

Web Reporting App — Transaction Banking Retail · PT Bank Mandiri · Region X

Web App

Form Automation

WhatsApp Integration

UI/UX Design

Automated

Input → Send

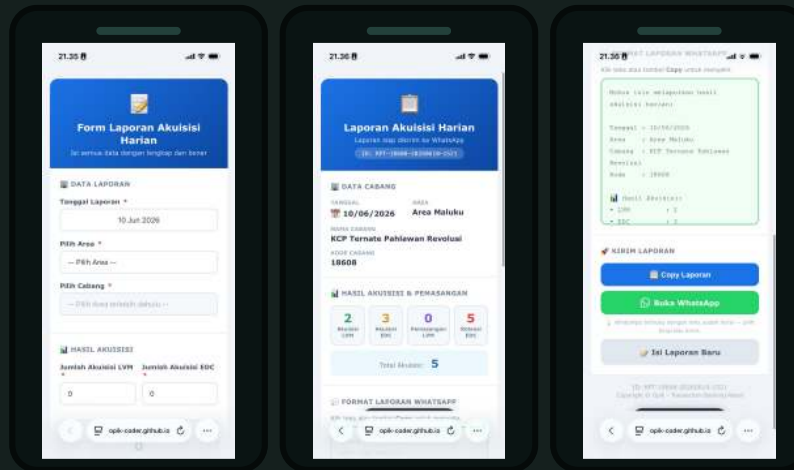

Standardized

Typo-proof

WhatsApp

1-click send

OVERVIEW

A daily branch reporting system built independently to replace the previous manual WhatsApp process that had no standard format. It automates the entire flow — from data input and visual summary to generating and sending the report to a WhatsApp group.

PROBLEM

Daily acquisition reporting was done manually via WhatsApp without a standard format, so each branch's report was inconsistent, error-prone, and hard to consolidate.

WHAT I DID

Built a web app with a structured input form (date, area, branch, acquisition results for LVM/EDC/installation/retention) that automatically computes totals and shows a card-based visual summary. The system then generates a standardized report text with a unique report ID, with 'Copy Report' and 'Open WhatsApp' buttons so the report is ready to send.

RESULT & IMPACT

Every branch now sends reports in a uniform, tidy, typo-free format in just a few clicks. Consolidation is easier and more consistent, saving field staff time.

① Note: All figures shown in the screenshots are randomized (dummy) data, not actual figures, to protect the company's confidentiality.

06 Live Pipeline Monitoring Dashboard (Google Sheets + Apps Script)

Real-Time Dashboard — Transaction Banking Retail · PT Bank Mandiri · Region X

Google Sheets

Apps Script

Automation

Data Visualization

26,483

Total pipeline

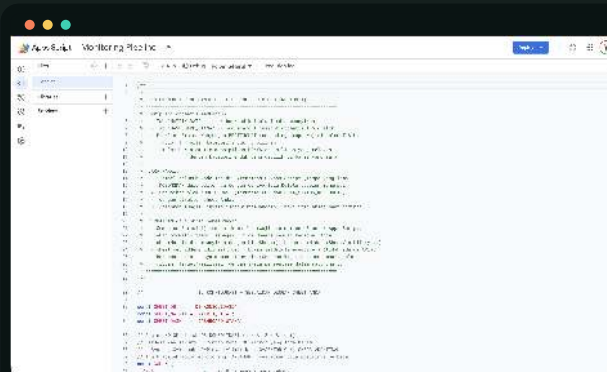

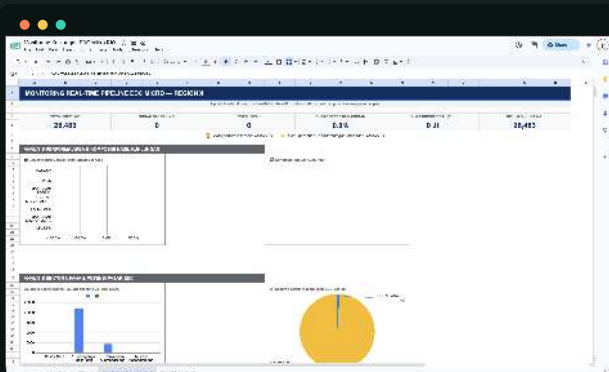

6 Charts

Auto analytics

Real-time

Auto-calculate

OVERVIEW

A real-time Google Sheets dashboard fully integrated with Google Apps Script. The script automatically builds the calculation backend, scorecard, automated insights, and various analytical charts to monitor a pipeline of 26,000+ prospective EDC Micro merchants in Region X.

PROBLEM

Monitoring visit progress and a large-scale EDC Micro pipeline was hard to do manually, and a dashboard that auto-updates and is accessible to the whole team in real time was needed.

WHAT I DID

Built a system with Google Apps Script that automatically composes a backend tab (MATRIX_DATA), a dashboard tab (scorecard + insights + 6 charts), and a cascading dropdown for visit status. The dashboard shows total pipeline, visit progress, total deals, credit limit, area achievement leaderboard, visit status composition, business sector analysis, and EDC ownership distribution — all auto-calculated from consolidated data.

RESULT & IMPACT

The team gets a single live dashboard that always updates and is shareable, monitoring 26,000+ pipeline and per-area visit progress in real time — replacing manual consolidation and speeding up field decisions.

① Note: All figures shown in the screenshots are randomized (dummy) data, not actual figures, to protect the company's confidentiality.

07 Branch Acquisition Reporting & Recap System (Google Sheets + Apps Script)

Google Sheets + Apps Script — Transaction Banking Retail · PT Bank Mandiri · Region X

Google Sheets

Apps Script

WhatsApp

Automation

180

Branches tracked

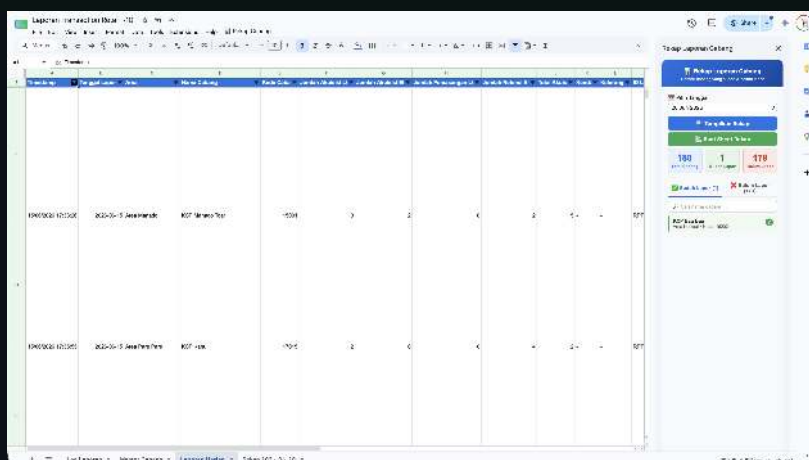

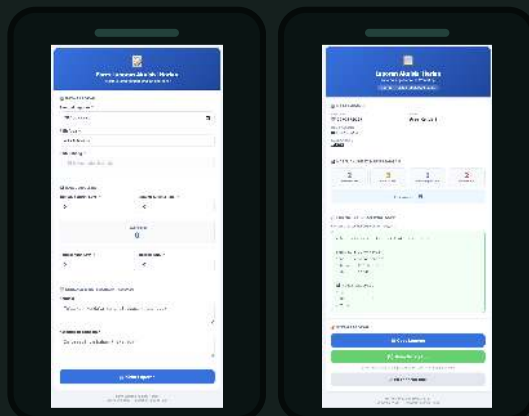

Reported/Not

Status view

WhatsApp

Copy & send

OVERVIEW

A daily branch reporting system I built with Google Sheets and Apps Script. Branch staff just fill in a form, and the result is automatically turned into a report text that's ready to copy into the WhatsApp group. On the manager's side, there's a recap panel to see which branches have reported and which haven't.

PROBLEM

Acquisition reports used to be sent manually in the WhatsApp group, with a different format for every branch. They were hard to check, easy to mistype, and there was no clear way to tell who hadn't reported yet.

WHAT I DID

I built an input form in Google Sheets (date, area, branch, LVM/EDC acquisition counts, installation, retention) that totals everything up automatically. Apps Script then formats the data into a standard report with a report ID, plus buttons to copy the text and open WhatsApp. For managers, a recap panel marks each branch as 'reported' or 'not yet' by date, with a branch search.

RESULT & IMPACT

Every branch's report is now uniform and tidy, ready to paste into the group. Managers can also see at a glance, out of 180 branches, who hasn't reported that day — without scrolling through the WhatsApp group one by one.

① Note: All figures shown in the screenshots are randomized (dummy) data, not actual figures, to protect the company's confidentiality.
